### **DETAILED ACTION**

The following is a response to the amendment received on August 31, 2005 which has been entered.

#### ***Response to Amendment***

Claims 14-24 are pending in the application. Claims 1-13 have been cancelled and claim 24 is newly added.

-The objection to the specification has been withdrawn due to applicant correcting a typographical error.

-The objection to claims 12, 19 and 20 are withdrawn due to the cancellation of claim 12 and providing consistency of limitations in claims 19 and 20.

-The 102(b) rejection of claims 12, 21 and 22 has been withdrawn due to the cancellation of claim 12.

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

-In claim 14, line 2 and claim 15, line 2, before "(8)", "clearance" has been changed to -displacement space-.

-In claim 15, line 2, before "two axially", "the" has been deleted.

-In claim 15, line 3, before "inner wall", "the" has been deleted.

-In claim 16, line 3, before "front", "the" has been changed to –a-.

-In claim 17, lines 2 and 3, before "outer side" and before "inner side", "the" has been changed to –an-.

-In claim 21, line 2, before "shifting device", "a" has been changed to –said-.

-In claim 22, line 3, before "outer friction cones", "the" has been deleted.

-In claim 23, line 15, after "(11", a parenthesis has been inserted.

***Allowable Subject Matter***

Claims 14-24 are allowed. The following is an examiner's statement of reasons for allowance: the prior art of record does not disclose or render obvious a motivation to provide for:

-(as to claim 23) a gear selector device having a pressure medium pipe with an axially extending pressure hole connected with an axial displacement space on the periphery of the pipe wherein actuation of the selected gear wheel is caused by axial movement of the pipe to position the displacement space in a region corresponding to a supply hole of a transmission shaft in combination with all the remaining limitations of claim 23.

-(as to claim 24) a gear selector device having a hollow axial pressure medium pipe supported in an axial bore of a transmission shaft and having an radial pressure medium hole extending to a periphery of the pipe wherein alignment of the medium hole with a pressure supply hole of the transmission shaft causes actuation of a shifting device in combination with all the remaining limitations of claim 24.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
